Subject: Glyphosate NSRL!
Date: Wednesday, June 14, 2017 1:12:57 PM

Hi Esther,

Our reefs are dying. Glyphosate keeps 80% of its toxic killing power, as runoff from farms all over the US (and the world), and travels to the ocean where it is destroying reefs that provide a home for many animals and food for the world. It is a known neurotoxin, and carcinogen. As someone who suffers directly from a liver that was filled with toxins, this is specifically close to home. I want a healthy world for myself and my family. Because no comprehensive, long-term, independent study has ever been done that shows real life exposure levels for glyphosate, the safe level of glyphosate exposure on a daily basis is currently ZERO. Please ban this toxic chemical!

Jasanna
